

# Human-Augmented Technology Interaction (HATI) for Improving Construction Quality Control and Task Monitoring: An Application of Augmented Reality (AR) for Visualization and Remote Project Management Support

Steven Hale, P.E.

(NDOT Project Champion)

Steven K. Ayer, Ph.D.

(ASU, Principal Investigator)

Mounir El Asmar, Ph.D.

(ASU, Co-Principal Investigator)

Pingbo Tang, Ph.D.

(CMU, Co-Principal Investigator)

Rita El Kassis

(ASU, Ph.D. student)

Jinding Xing

(CMU, Ph.D. student)

# Introduction

- Research project 1/31/2020 to 12/31/2022
- Project consists of five phases
  - ❖ Phase 1 - User Interface Defined (Complete)
  - ❖ Phase 2 - Iterative AR Development (Complete)
  - ❖ Phase 3 - Field Testing of Developed AR (In-Progress)
  - ❖ Phase 4 - Data Analysis (In-Progress)
  - ❖ Phase 5 - Finalizing and Report Findings

# Introduction

## Current issues (NDOT/Nationwide?)

- Lack of manpower (vacancies)
- Imperfect contract plans
- Inexperienced personnel due to retirements
- Travel budget constraints
- Miscommunication
- Time

# Introduction

## Assistance with Data Collection

- Crew 903 (Luke Rollins, Kody Livreri, Jaime Hovietz)
- Crew 904 (Sam Thompson & Shaun Wang)
- Crew 913 (Alma Piceno-Ramirez & Ian Neeley)
- HDR (Reid Kaiser & Dean Weitzel)

Problem: Stakeholders cannot always be physically present on project sites to monitor tasks and provide guidance to field engineers.

# Project Concept (Planned)

User in Office

Phone: Quick, but prone to errors

In-person: Effective, but time consuming

Aim: Consistent and efficient understanding of problem context through AR.

The screenshot displays a Windows Mixed Reality application interface. At the top, a search bar contains the text "Search or type a command". The user's profile is identified as "Arizona State University" with initials "AH". A navigation sidebar on the left includes icons for "Assignments", "Calls", "Files", and "Apps". The main content area features a video call window with a participant named "Archana Harkulshnan (Student)". Below the video call is a 3D architectural model of a building structure with a rebar grid. A "Start editing" button is visible above the model. A video player interface is overlaid at the bottom, showing a progress bar at 0:01:11 and a thumbnail of the video call at 0:03:59. The Windows taskbar at the bottom includes the Start button, search bar, and various application icons.

### PRECAST DECK PANEL ASSEMBLY PROCEDURE

1. PLACE PRECAST DECK PANELS BETWEEN ABUTMENTS FROM ABUTMENT #1 TO ABUTMENT #2.
2. PLACE ABUTMENT DIAPHRAGMS.
3. PLACE REMAINING DECK PANELS FROM END OF APPROACH SLAB #1 TO END OF APPROACH SLAB #2.
4. COUPLE POST-TENSIONING DUCTS AND INSTALL TENDONS.
5. GROUT TRANSVERSE JOINTS.
6. STRESS POST-TENSIONING TENDONS AND GROUT POST-TENSIONING DUCTS.
7. GROUT VOID BETWEEN THE GIRDERS AND PANELS AND IN SHEAR BAR BLOCKOUTS.
8. PLACE REINFORCING AND FORM BRIDGE BARRIER RAIL.
9. PLACE BARRIER RAIL CONCRETE.
10. GRIND AND RE-GROOVE DECK AS REQUIRED.
11. REPEAT STEPS 1 TO 10 FOR PHASE 2.
12. FORM LONGITUDINAL CLOSURE POUR JOINT AND PLACE REINFORCING.
13. PLACE CLOSURE POUR CONCRETE.

# Practical Applications

- Field inspector/tester communicating with RE
- RE communicating with applicable technical expert
- Independent Assurance (IA) inspector performing visual audit of Quality Assurance (QA) inspector
- Visual project documentation

# Data Collection

## Work Completed

- Literature review
- Surveys – traditional modes of communication
- Field testing
  - Video Recordings
  - 17 recorded calls
- Interviews – Perceptions on AR call experience

## Upcoming Work

- Focus groups – How do we modify our deliverables to make them useable?

Factors		Cell-phone/ tablet based AR	Trimble XR-10- (HoloLens 2-) based AR
<b>related to site conditions</b>			
1	Requires internet connection (i.e., WiFi or hotspot)		
2	Functions at high temperatures above 86°F		
3	Functions at high temperatures above 95°F		
4	Usable in bright sunlight without modifications		
5	Usable in bright sunlight with shading device *	NA	
6	Usable in low light condition (night)		
7	Usable in high wind condition		
8	Usable during rain and snow		
9	Usable during dust condition		
10	Usable around high human traffic		
11	Usable in moist condition		

# Mixed Reality (MR) Selection Framework

Legend	
	Possible and tested
	Tested and not possible

NA: Not Applicable.

\*Shading device: Crafted tinted film mask, installed at the front area of the holoLens.

# Mixed Reality (MR) Selection Framework

Factors		Cell-phone/ tablet based AR	Trimble XR-10- (HoloLens 2-) based AR
<b>related to AR specifications</b>			
1	Enables remote synchronous communication		
2	Enables sharing virtual drawings in case paper drawings are missing		
3	Enables the ability to intuitively annotate through AR to identify points of interest †		
4	Enables the use of both hands during discussion		
5	Supports discussions involving multiple points of interest †, requiring physical movement and a clear view of the site		
6	Supports discussions involving far and unreachable point of interest †		
7	Enables recording calls for documentation		
8	Supports discussion calls involving more than 2 users		
9	Needs training sessions before use		
10	Needs safety awareness during the use		
11	Supports power bank charging during the use		
12	Supports privacy and promote data security		
13	Supports upgrades		
14	Supports data storage and high memory		

Legend	
	Possible and Tested
	Tested and Not Possible

NA: Not Applicable.

† Point of interest: This refers to the location of the built element(s) or object(s) that are relevant to the discussion. For example, for a concrete column inspection call, the concrete column itself would be the point of interest.

# Next Steps for NDOT

- Present findings to SLT/ELT
  - ❖ Benefit/Costs
    - Software licenses
    - Hololens or other similar device
    - Cell phones/IPads
    - Training
    - Possible maintenance/updates on hardware and software

# Thank You!
